

Open and Distance Learning for Plant Breeding

OBJECTIFS

Creation of an e-learning platform in plant breeding sciences.

ACTIONS

Meeting for the creation of the project between the partners and with new foreign partners

Evaluation of the open and distance learning courses available and proposition of new contents that must be created

Action planned:

Aggregating a team in charge of defining the framework of an ODT platform devoted to plant breeding

Make an assessment of knowledge required to follow a master in plant breeding or to make a training in one of the partner laboratory.

Evaluation of free existing online resources

Creation of a quiz to test student knowledge.

Open Distance Learning courses will be created by teachers and associated researchers of the different partner's units.

PERSPECTIVES

Creation of web platform with a quiz and a link to a list of on-line courses available

Creation of one or two on-line courses

Proposals of a full project for the creation of a full e-learning module
