

Congrès “Biorefinery for Fuels, Food and Materials” (BFFM 2015), 15-17 juin 2015

OBJECTIFS

The objective of this congress is to contribute to the international reflection on the strategies and innovations necessary for a successful transition from the petroeconomy to the bioeconomy, whether at the technological, economic or societal level. In particular, it seems vital to associate the food and non-food agro-industrial sectors in the same reflection, a point to which the congress organisers will pay particular attention.
