

Creation of a "multimedia animation" for the public communication of INRAE's national REUSE network

OBJECTIFS

2) to conduct "proof-of-concept" interdisciplinary research on specific survey sites (two countries, three crops) targeting the definition of new indicators and criteria of plant health, and identifying virtuous agronomic practices that foster plant health, especially by deciphering the microbiota in order to identify its beneficial members or interactions and to promote them, thereby reducing the use of pesticides.
