

**Alia Gana – Director of research, National Center for Scientific Research, CNRS (France), *Le Laboratoire Dynamiques sociales et recomposition des espaces (LADYSS)***

Alia Gana holds PhDs in Rural and Environmental Sociology from Cornell University and in Economy and Society from the University of Paris X. Her field of expertise covers, among others, farming systems' analyses; agricultural and rural development; social management of natural resources and environmental issues; as well as agricultural knowledge, science and technology for development. At CNRS, Gana has been in charge of scientific coordination of the international program "Water crisis and perception of environmental risks in the Mediterranean" and of the program "Integrating Gender in the Management of Water Resources in the Maghreb countries" supported by the food and Agriculture Organization of the United Nations (FAO). She is currently the coordinator of the research group on "Agricultures, territories and sustainable development: international perspectives" set up within the framework of the International College of Territories Sciences ([www.gis-cist.fr/](http://www.gis-cist.fr/)). Her most recent work also includes a research on "Farmers and farmers' organizations in the democratic transition in Tunisia".
