INTRODUCTION

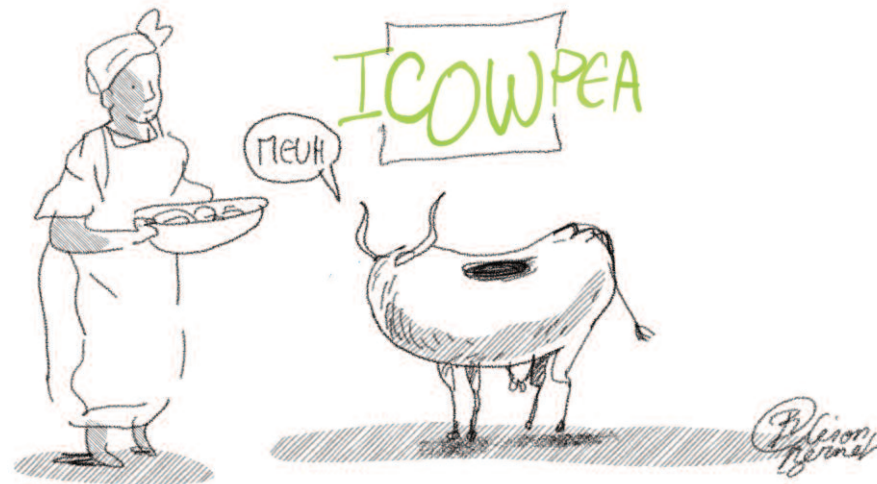

Thought for Food is an initiative of Agropolis Fondation, Fondazione Cariplo and Fondation Daniel & Nina Carasso in a combined effort to promote transdisciplinary research on sustainable food systems.

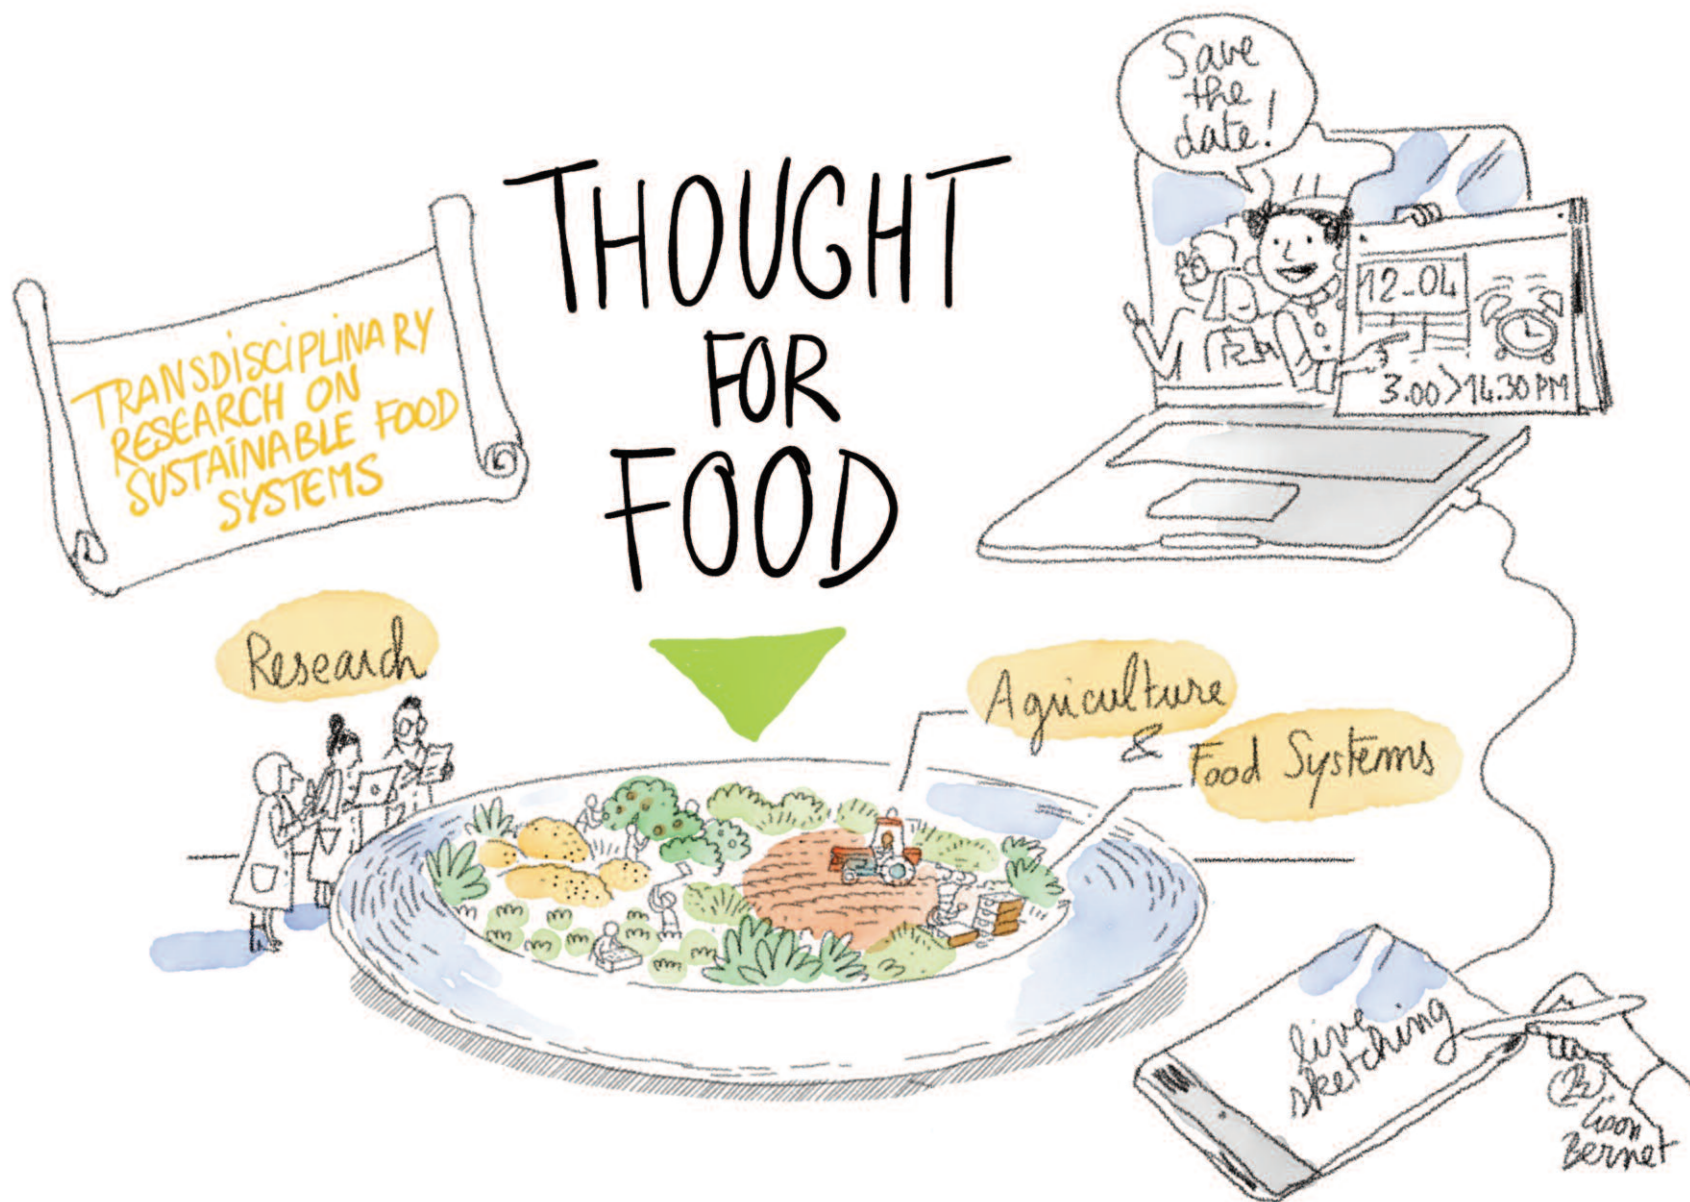

The objectives of the initiative are threefold:

- to advance understanding of food systems sustainability;
- to facilitate the emergence of excellent, new and potentially high-impact research;
- to generate leverage effect that encourages new collaboration across disciplines and across diverse stakeholders.

On the occasion of the 4th Global Conference on Food Security in December 2020, we have organized mini-symposia highlighting the key results of the six projects supported under this initiative. We also had conversations on the role of science, transdisciplinary research, the scientific community and the foundation sector in contributing towards a future of food that is sustainable.

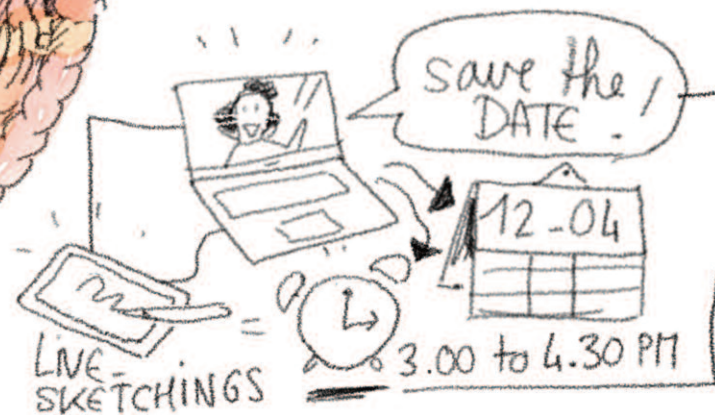

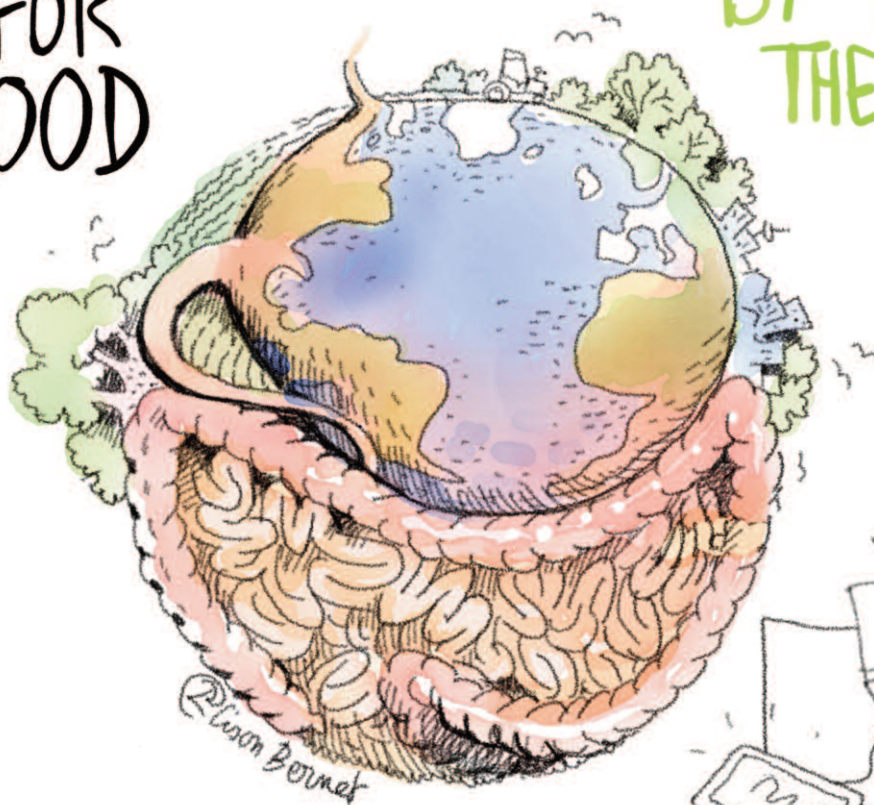

This booklet* captures the discussion that took place during this session. *Sketches by Lison Bernet
