

A collaborative network to support Earth observation for land monitoring in the South

OBJECTIFS

The objective of this project is twofold: (1) support the organization of a new event to federate and (re)boost the French community around the GeoDEV Network and Platform, and (2) update the GeoDEV website in order to make it a real collaborative tool with international ambitions. This tool will be developed in French, in order to connect better with some of our African partners, and translated later in English and Portuguese.
